Cultural History / Meanings and Ideas of Nature (11)

Overview and Synthesis. Surveys; and detailed reviews of literature were employed in these studies. This chapter presents the key findings and implications from these studies, and readers are strongly encouraged to refer to the specific chapter(s) for further details.

Total eggplant production in the Philippines increased by 2.1% per annum during 2000-2009 despite a lower growth rate in area planted. In the same period, the national eggplant yield levels showed a generally increasing trend, albeit only slightly, and appeared to be stable at around 9 m tons/ha (Chapter 2). More recently in 2006-2011, production increased by 8.4%, area planted by 2.3%, and yield by almost 6%, to 9.7 m tons/ha. Eggplants are available year round in the markets, with supply highest between January to August.
